

NEW AMERICAN HYBRID RHODODENDRONS

No. 2

**RUDOLPH HENNY
Box 162, BROOKS, OREGON
Ph. Gervais, 2341**

This list of my introductions includes seven new hybrids, and one selected species. All the new plants are of good habit and foliage with new novel form and color. All can be easily grown in the ordinary garden. The list again includes all of the plants first introduced in 1958. The acceptance of those new introductions was most gratifying and many plants are now growing in gardens on the Pacific Coast. The behavior of these plants has been recorded in the many fine letters received from gardeners from here and abroad. The plant Rh. 'Captain Kidd' one of the original introductions was granted the P.A. from the American Rhododendron Society in 1960.

Conditions of Sale

TERMS: Net cash.

PRICES: All prices F.O.B. Brooks, Oregon.

GUARANTEE: All plants are guaranteed true to name.

SHIPPING METHOD: Plants will be shipped Express collect.

NEW INTRODUCTIONS

1961

BRICKDUST: (*R. williamsianum* x 'Dido')

An almost dwarf plant of fine habit. The leaves are round and dark green and very dense. The new growth in the spring is a fine bronze color. Each flower is three inches across, flat like a saucer, and of excellent substance, all borne in an upright manner. The flowers show in the first week of May and are colored Rose Madder shaded to Rhodonite Red, much like the color of certain old Roman bricks.

8-10" \$10.00

FAIR LADY:

P.A. 1959 (*arboreum roseum* x 'Loderi Venus')

The upright trusses of Tyrian Rose bloom show in the first week of May, and are a fine sight. The foliage and habit are excellent and it will grow to six feet in fifteen years. This plant withstood the freeze of 1950 and 1955 without damage.

Year old plants \$10.00

FINCH:

A selected form of *Rh. desquamatum*.

I have had this plant from the Barto Garden for nearly twenty years and it is now fifteen feet in height. This superior form propagated from the original plant has proved itself hardy in our coldest weather, and always blooms well. The color is Mallow Purple, with just a few crimson spots. The flowers are slightly larger than the ordinary type being $1\frac{3}{4}$ inches across and present an outstanding appearance in mid April.

10-12" \$5.00

2 ft. branched \$7.50

HONEY: (*wardii* x 'Bow Bells')

A prostrate shrub with fine foliage, that will perhaps grow to three feet across, but never over a foot high. The foliage, along with the habit, and quite large flowers of Egyptian Buff make this a very desirable novelty. Blooms mid April.

6-8" \$10.00

A few plants \$15.00

LAST CHANCE:

P.A. 1957 (Rh. 'Mars' x *erigynum*)

This hardy hybrid out of the same seed pod as Rh. 'Captain Jack' was the last of nearly 100 seedlings to bloom. The fine truss has the largest red flowers that I have yet raised, each flower in the upright truss is 3½ inches wide, and number 15-17. The bloom in the middle of May is Claret Rose, with the center shaded to Delft Rose. The foliage is large, dark green, and the plant habit is better than ordinary.

8-10" plants \$10.00

Larger Budded Plant \$15.00

REDWAX:

P.A. 1957 (Rh. *haematodes* x 'May Day')

As the parentage indicates Rh. 'Redwax' is three quarters Rh. *haematodes* and all the characteristics of Rh. *haematodes* are present; the dark green foliage, slow habit of growth and a handsome bright rust color on the underside of the leaf. The plant blooms in a year or so from cuttings, and is much easier to grow than Rh. *haematodes*. The bloom shows in mid April and is very waxy and fleshy. The color is brilliant Orient Red.

4-6" plants \$10.00

TIDBIT: P.A. 1957 (*R. dichroanthum x wardii*)

A low growing densely foliated plant with a fine habit of growth. The flowers are very fleshy, campanulate 2" wide and 2½" long, and open in the middle of May. There are 6 to 7 blooms in each truss that open Straw Yellow and change to a more intense yellow after several days.

6- 8" \$10.00
10-12" budded \$15.00

WHIMSEY: (*R. soulei x 'Bow Bells'*)

The foliage and habit of this fine plant is much like that of Rh. 'Bow Bells' but the flowers are much larger and stand quite upright. The plant blooms in the third week of April and covers itself with pink unspotted bloom. The original plant after thirteen years is two feet high and about as much a cross, and has excellent habit.

6-8" \$10.00
2 ft. field grown \$15.00

RHODODENDRON HYBRIDS

The following rhododendrons raised by me and introduced first in 1958 are again offered to gardeners at new prices, and larger sizes. The fractional numbers preceding the name represent the newest ratings of the American Rhododendron Society. The top numbers giving the bloom quality, and the bottom the plant merit. A plant with a 4/4 rating would represent the highest achievement possible.

3/3 CAPTAIN JACK: P.A. 1956 ('Mars' x *erigynum*)

Bright blood red trusses the first week of June.

8-10" \$10.00

12-15" \$15.00

3/2 CAPTAIN KIDD:

P.A. 1960 ('Princess Elizabeth' x 'May Day')

An irregular growing plant with fine red upright flat bloom, each flower 3½ inches in diameter.

2 ft. \$10.00

2/2 CAVALIER: ('Pygmalion' x 'Tally Ho')

Fine neat foliage and habit with large trusses of red bloom heavily spotted within, show in the last week of May.

2 ft. budded \$10.00

3 ft. budded \$15.00

4/2 C.I.S.: P.A. 1952 ('Loders white' x 'Fabia')

An unusual and novel hybrid with large four inch bloom of cream yellow, and crimson. Blooms near the middle of May.

6- 8" \$ 6.00

10-12" \$ 7.50

2 ft. budded \$15.00

3 ft. budded \$20.00

4 ft. budded \$35.00

3/3 CONFECTION: P.A. 1956 ('Corona' x 'Dondis')

Trusses of Rose Madder flowers in the last week of May show with great effect in this hardy hybrid.

8-10' \$6.00 No larger sizes

3/2 **DR. ROSS:** (*griersonianum* x 'Borde Hill')

A plant with fine habit and showy red trusses in the middle of May.

8" \$ 6.00

3 ft. \$20.00

4/3 **ELLA:** (*dichroanthum* x *wardii*)

A dense compact plant with outstanding yellow bloom.

6-8" \$6.00

3/3 **GOLDBUG:** (*croceum* x 'Fabia')

An almost dwarf bush with excellent habit and dense foliage. The bloom changes from crimson to straw yellow, and is a novel sight, in a plant of some size. The inside of the bloom is spotted all around with red spots. Blooms in mid May.

6- 8" \$ 6.00

10-12" \$10.00

18" \$15.00

3/3 **JADE:** ('Fabia' x 'Corona')

A compact slow growing plant with trusses of pink-orange bloom eventually changing to greenish-yellow. In the last week of May.

6- 8" \$ 6.00

10-12" \$10.00

2 ft. budded \$15.00

3/2 **LEONA:** ('Corona' x 'Dondis')

A hardy fine foliated plant that does well in the full sun. Tall trusses of pink flowers in the first week of June.

12" \$ 6.00

2 ft. budded \$10.00

3 ft. budded \$20.00

4 ft. budded \$25.00

3/2 **LITTLE PUDDING:**

P.A. 1953 (*decorum* x 'Fabia')

Slow growing and irregular in habit. Large four inch bloom, coral pink to tan.

10-12" \$ 6.00

2 ft. budded \$10.00

3/4 LITTLE SHEBA:

P.A. 1954 ('Earl of Athlone' x 'Fabia' x
forrestii var. *repens*)

A very dwarf prostrate hybrid. Blood red bloom show
the first week of May.

Year old plants field grown \$ 6.00

Two year old field grown \$10.00

2/2 QUINIELLA: ('Brittania' x 'May Day')

A hardy plant of good habit, with trusses of almost
double bloom showing the first week of June.

1 ft. \$6.00

3/2 RED CLOUD: P.A. 1953 ('Tally Ho' x 'Corona')

An upright growing plant with fine dark green foliage.
Good trusses of red flowers the last week of May.

10-12" \$6.00 — 2 ft. \$10.00

3 ft. budded \$15.00

4 ft. budded \$25.00

2/2 STOPLIGHT:

P.A. 1951 (*griersonianum* x 'Cornubia')

Bright showy red bloom the middle of April.

2 ft. budded \$15.00

3 ft. budded \$20.00

2/3 VODOO: P.A. 1955 ('Brittania' x 'May Day')

A very compact growing plant that blooms most pro-
fusely every year. The red loose trusses cover the plant
in the middle of May.

12" 6.00
